- Training load chart can be used to calculate estimated 1-repetition maximum (1RM) values from multiple repetitions completed
 - For example, if an athlete completes 8 repetitions of the squat at 160 lbs, the estimated 1RM would be 200 lbs.
- Training load chart can also be used to assign intensity percentages for program design
 - For example, if an athlete's 1RM for the squat is 200 lbs, he/she should be able to successfully complete 10 repetitions of 150 lbs, or 75% max intensity.
